## EDUCATION

### Lehman College, CUNY

Bachelor of Science, Computer Science (Transfer)

Bronx, NY

Jan 2026 – Dec 2027

### Borough of Manhattan Community College, CUNY

Associate in Science, Computer Science

Manhattan, NY

Sept 2022 – Dec 2025

- **Relevant Coursework:** Data Structures, Analysis of Algorithms

## EXPERIENCE

### Blackstone Launchpad | ServiceNetZero

New York, NY

Business Development Intern

June 2026 – Aug 2026

- Architected **v3 of the LabelZ platform** using TypeScript, Python, Vite, Claude, and IBM Bob, with Base44 for user profile management – taking the company **from idea to MVP** and giving ServiceNetZero an actual product to sell.
- Reworked the company landing page applying **SEO and AIO/GEO (LLM visibility)** principles and website schema, producing an immediate **22% improvement in visibility to LLMs** and a spike in SEO performance in Google Analytics.
- Built a **market intelligence dashboard** that improved business research efficiency by **over 60%**, visualizing quantitative and qualitative data side by side from non-LLM sourced data.
- Sourced, applied to, and participated in the **NSF I-Corps regional bootcamp**, securing **\$3,000** in funding for customer discovery and conducting academic research under NSF supervision.
- Ran **daily Agile standups** and maintained project databases in Notion; used active listening to translate high-level concepts from non-technical stakeholders into concrete technical execution while managing scope and budget.

### Cambio Labs

Remote

Software Engineer Intern

Feb 2026 – May 2026

- Designed and built a **23-step interactive onboarding tour** in React/TypeScript guiding new instructors through the full course lifecycle – from creating a course to publishing it – across **10+ admin pages**.
- Built a custom **spotlight and tooltip overlay from scratch** instead of using a third-party library, supporting async-loaded elements, viewport-aware placement, and a draggable tooltip card.
- Centralized tour state in a single **React Context** shared across nested routes, tracking progress and user-created IDs so Skip, Back, and Resume route users to the correct page.
- Made steps **action-driven** – the tour advances only when users complete the real task (creating a course, adding a checkpoint, uploading media), teaching the product through actual use.

### NYC Tech Talent Pipeline Program

Manhattan, NY

Software Engineering Trainee

June 2025 – Aug 2025

- Built **Poll Maker** on a team of four (JavaScript, React, Node.js, Express, SQL), a full-stack app for creating interactive polls and tracking progress.
- Developed an **AI study assistant** that helps students generate dynamic quizzes, track study habits, and determine class grades.

## PROJECTS

### AlgoStrike | *Next.js, Node.js/Express, PostgreSQL, Socket.IO, Docker* | [algostrike.dev](https://algostrike.dev)

2026

- Architected and shipped a full-stack **1v1 real-time competitive coding platform** solo – players are matched live, solve the same problem head-to-head, and race to win – deployed to production on a custom domain over HTTPS.
- Built a secure **multi-language code-execution engine** running untrusted submissions (Python, JavaScript, Java) in isolated Docker containers with no network access and strict CPU/memory/5-second limits, paired with an automated grader for **50+ LeetCode-style problems**.
- Owned the **end-to-end deployment**: provisioned an Ubuntu VPS with Docker, configured nginx as a reverse proxy with Let's Encrypt TLS and WebSocket support, ran Node under pm2, hosted the frontend on Vercel, and connected a managed Postgres database.

### LockIn | *JavaScript, React, Next.js, Node.js, Express, SQL*

2025

- Built a full-stack student platform on a team, shipping a **Grade Calculator**, progress dashboards, and an **AI Study Chat** for real-time contextual help.
- Diagnosed slow content load times and **migrated the website from React to Next.js**, adopting server-side rendering and route-based code splitting to cut initial page load.

## LEADERSHIP & COMMUNITY

**Computer Science Club, ColorStack Chapter** – Technical Team Member (Oct 2025 – Dec 2025) | Lead LeetCode and DSA workshops, mentor peers in problem-solving and interview prep | **Open-Source Contributor** – Hacktoberfest 2025

## TECHNICAL SKILLS

**Languages:** JavaScript, TypeScript, Python, HTML, CSS, SQL

**Frameworks & Libraries:** React, Next.js, Node.js, Express, TailwindCSS, Socket.IO, Vite

**Databases:** PostgreSQL, Sequelize (ORM), Backend Schema Data Tables

**Infrastructure & Deployment:** Docker, nginx (reverse proxy, TLS), pm2, Vercel, GitHub Pages

**Tools:** Git, GitHub, VS Code, Notion, Claude, IBM Bob, Base44, Postman, Figma, Chrome DevTools, Bash, npm

**Techniques & Concepts:** REST APIs, Agile, SEO/AIO/GEO, Data Visualization, HTTP, OAuth 2.0, OpenAPI Specification, Responsive Design

**Natural Languages:** English (Fluent), Spanish (Fluent)
